SUMMARY

AI/ML Engineer with **1.5+** years of experience designing and shipping production AI systems end-to-end from data pipeline to deployed model. Comfortable owning the full stack: cloud infrastructure, ML architecture, and stakeholder buy-in, across both enterprise and independently- built systems. AWS Machine Learning Associate certified, with a track record of turning ambiguous, manual processes into automated, measurable systems. Strong foundation in DSA (400+ problems solved) and applied ML across classification, RAG, and anomaly detection.

PROFESSIONAL EXPERIENCE

AI/ML Engineer - TCS (Defense Systems Project)  2025 Feb – Present | Pune

- Built and deployed a fully automated testing framework for a mission-critical systems platform, replacing manual QA across **450+** test cases and reducing test cycle time from **2 days to 37 minutes** per system per full suite run.
- Engineered zero-touch execution via log-based state verification and programmatic DI control, eliminating subjective free-text reporting and improving defect-detection consistency by **83%**.
- Extended the framework into an ML pipeline: trained a TF-IDF + Random Forest classifier on 700+ accumulated failure records, achieving **74%** accuracy in automated failure categorization, and deployed log-based anomaly detection that surfaced 96 borderline-pass cases previously missed by manual review.
- Delivered as a 4-phase enterprise AI/ML initiative - from test automation to production ML - approved via a risk-minimized pilot rollout.

PROJECTS

Apptytic: AI-Powered Job Application Analytics Platform, | *Live* | *GitHub*

- Architected a full-stack serverless platform (React, API Gateway, Lambda, DynamoDB, Cognito, Bedrock) that runs multi-dimensional pattern analysis on job search data - resume version, channel, company size and delivers insights via an AI coaching chat.
- Engineered for production scale: **10K req/sec** throughput, **99.999%** DB availability, **sub-400ms** cold starts, and CDK deploys in under **3** minutes. Shipped with OIDC-based CI/CD, full observability (X-Ray, CloudWatch, SNS), and **90.75%** test coverage across **221** tests - running at \$0-25/month cost even at 1,000 users.

Auditq: AI-Powered Compliance Audit Validator, | *GitHub*

- Built a RAG-based compliance auditing agent that validates enterprise documents against **22** regulatory rules across **5** frameworks (GDPR, SOX, HIPAA, PCI-DSS, Insurance) using FAISS retrieval and Qwen2.5-7B-Instruct for structured, evidence-grounded validation.
- Designed a blended confidence-scoring system (LLM self-score + retrieval similarity) with severity-weighted risk scoring and automated 5-page PDF report generation, plus a grounded chat assistant for audit Q&A.
- Deployed on FastAPI with a production dashboard, running inference entirely on AMD Instinct MI300X (ROCm 7.2) at **~15.9s/chunk** latency.
- Built solo in **10** days for the TCS & AMD AI Hackathon 2026.

HACKATHONS

AMD & TCS AI Hackathon 2026: Built Auditq, a RAG-based compliance audit validator on AMD Instinct MI300X (*see Projects*) - Track 1: Agents, solo, 10 days.

TCS AI Friday Hackathon 2025: Built and publicly deployed an AI-powered personalized learning path recommender (Streamlit + Groq Llama-3.3-70B) with dual AI/logic-based recommendation modes across 3 learning tracks.

SKILLS

- **Programming:** Python, TypeScript, C++, SQL
- **ML / AI:** TensorFlow, PyTorch, Keras, Scikit-learn, LangChain, RAG, LLM, Pandas, NumPy
- **Generative AI:** Amazon Bedrock, Gemini API, Groq, DeepSeek, OpenAI API
- **Cloud & Infra:** AWS, Lambda, DynamoDB, S3, CDK, Cognito, SES, EventBridge, CloudFront
- **Databases:** MongoDB, MySQL, DynamoDB
- **Dev & Deploy:** Flask, FastAPI, Django, Docker, Kubernetes, GitHub Actions, CI/CD, Git, Linux

EDUCATION

Vishwakarma Government Engineering College 

B.E. in Electronics & Communication

2020 – 2024 Ahmedabad

7.73 CGPA

CERTIFICATION

AWS Machine Learning Associate 

Github Foundations - Microsoft 

ML Specialization - DeepLearning.AI
